PROFESSIONAL SUMMARY

2026 B.Tech graduate in Electrical and Electronics Engineering with a Minor in Computer Science Engineering and hands-on knowledge of Full Stack Java Development. Strong foundation in Core Java, OOP, Spring Boot, REST APIs, JDBC, JSP, Servlets, SQL, MySQL, HTML, CSS, JavaScript, and React.js. Project experience includes authentication, CRUD operations, database integration, API development, debugging, and structured application architecture. Familiar with AI/ML and LLM concepts, Docker, CI/CD, Kafka, Redis, Kubernetes, Jenkins, and NoSQL fundamentals.

TECHNICAL SKILLS

Programming: Java, Python, JavaScript, SQL

Java / Backend: Core Java, OOP, Collections, Exception Handling, Multithreading, JDBC, JSP, Servlets, Spring Boot, Hibernate

Web / APIs: React.js, HTML5, CSS3, REST APIs, JSON, HTTP Methods, MVC, DAO Pattern

Databases: MySQL, Joins, Subqueries, Normalization, Indexing, Database Design; Oracle concepts

AI / ML: Machine Learning fundamentals, LLM/OpenAI concepts, AI Agents fundamentals

Messaging / Caching: Apache Kafka fundamentals, Redis fundamentals, Memcached concepts

DevOps / Tools: Docker, Kubernetes fundamentals, Jenkins/CI-CD concepts, Maven, Git, GitHub, Postman

NoSQL: Cassandra and NoSQL fundamentals

PROJECTS

Food Delivery Web Application

Technologies: Java, JEE, JSP, Servlets, JDBC, MySQL, HTML5, CSS3, Maven

- Developed a full-stack food ordering web application supporting user registration, login, restaurant browsing, menus, cart operations, and order processing.
- Implemented backend application logic using Core Java, Servlets, JSP, and JDBC with a structured MVC architecture.
- Applied the DAO design pattern to separate database access from application logic and improve code maintainability.
- Built CRUD operations for users, restaurants, menu items, and order-related data using JDBC and parameterized SQL queries.
- Designed relational database entities and relationships for users, restaurants, menus, orders, and order items in MySQL.
- Implemented session-based authentication and application navigation to maintain user state across the ordering workflow.
- Debugged application and database issues by reviewing errors and logs, identifying root causes, applying fixes, and retesting.
- Used Git/GitHub for source-code management and deployed the application using a containerized Tomcat environment.

Spring Boot REST API Application

Technologies: Java, Spring Boot, REST API, Hibernate/JPA, MySQL, Postman, Maven

- Developed backend REST services using Java and Spring Boot following a layered application architecture.
- Created Controller, Service, Repository, and Model layers to provide clear separation of application responsibilities.
- Designed RESTful endpoints for create, read, update, and delete operations using standard HTTP methods.
- Implemented JSON-based request and response handling for communication between clients and backend services.
- Integrated MySQL for persistent data storage and applied Hibernate/JPA concepts for object-relational mapping.
- Validated API endpoints, request payloads, response data, and HTTP status behavior using Postman.
- Used Maven to manage application dependencies and maintain a structured Spring Boot project configuration.
- Used Git and GitHub for version control while practicing debugging, exception handling, and backend troubleshooting.

Personal Portfolio Web Application

Technologies: HTML5, CSS3, JavaScript

- Developed a responsive personal portfolio website to present education, technical skills, software projects, and professional information.
- Created structured sections including About Me, Skills, Projects, Contact, and Resume for clear navigation and presentation.
- Used semantic HTML5 elements to organize page content and improve the maintainability of the website structure.
- Designed responsive layouts with CSS3 to support desktop, tablet, and mobile screen sizes.
- Implemented JavaScript-based interactions to improve navigation and overall usability of the portfolio.
- Integrated LinkedIn and GitHub profile links to provide direct access to professional and project information.
- Presented software projects with technology stacks and descriptions to demonstrate practical development experience.

- Practiced frontend debugging, responsive design, UI organization, and cross-device layout improvements.

ATM Management System

Technologies: HTML5, CSS3, JavaScript

- Developed an interactive ATM simulation application to demonstrate common banking operations through a browser-based interface.
- Implemented four-digit PIN validation to simulate a basic authentication flow before providing access to transactions.
- Added features for checking account balance, depositing funds, withdrawing funds, resetting operations, and logging out.
- Used JavaScript to implement transaction processing logic and dynamically update account information on the interface.
- Added input validation to prevent invalid transaction values and improve the reliability of user interactions.
- Designed the user interface with HTML5 and CSS3 to provide a simple and organized transaction workflow.
- Handled different transaction scenarios and practiced debugging logical issues in user input and balance calculations.
- Strengthened understanding of JavaScript fundamentals, validation, application flow, state handling, and frontend troubleshooting.

EDUCATION

B.Tech - Electrical and Electronics Engineering | Minor: Computer Science Engineering
Annamacharya Institute of Technology and Sciences | Graduation: 2026 | CGPA: 8.42/10

TRAINING

Full Stack Web Development - Tap Academy

- Training in Java and Python full-stack development including Core Java, OOP, JDBC, Servlets, JSP, Spring Boot, Hibernate, SQL, and MySQL.
- Exposure to HTML, CSS, JavaScript, React.js, REST APIs, Git/GitHub, database integration, debugging, troubleshooting, and software development practices.
